INTERNATIONAL SCIENCE AND INVENTION FAIR

Bandung, November 2020

INTRODUCTION

By looking at the development and knowledge of children today about science, invention and innovation, especially in the field of science, it requires us to know the extent of the students insights, knowledge and abilities in applying their knowledge of science.

Therefore, our **Indonesian Young Scientist Association (IYSA) Indonesia** will hold an international-level Invention competition called **"International Science and Invention Fair (ISIF)"** as the right learning platform to nurture our young talented inventors who are active, creative and

Indonesian Young Scientists Association (IYSA) is an institution that moves on the development of the potential, talents and creativity of the Indonesian students by providing opportunities for Indonesian students

on competition and non scientific competition domestically or abroad. Therefore IYSA stands as a form of our deep concern provide opportunities for Indonesian students specifically, in order to bring up potential and the skills needed and soul-building competition in themselves. We do this to create improvements in life. Because, we believe that every student has potential which can be developed.

Since its inception, IYSA has been active in a variety of ways activities that can be affiliated with a lot countries like: Malaysia, Thailand, Singapore, China, India, Taiwan, Turkey, Tunisia, Egypt, Abu Dhabi and others.

INDONESIA INTERNATIONAL INSTITUTE FOR LIFE SCIENCES

The Indonesia International Institute for Life Sciences (i3L) is an educational and research institution dedicated to providing quality education and research based in Jakarta - with satellite facilities for marine, forest and health research and an international network of world-class teachers, private sector leaders, and various research partners.

Equipped with world-class facilities and lecturers with the largest number of scientific journal publications in Indonesia, i3L pioneers the development of research capabilities and capacities that have not been tried before in Indonesia with an emphasis on global competence, entrepreneurship, and the integration of educational and research activities to produce scientific leadership ready to face the challenges of the 21st century. Lectures at i3L itself use English starting from the entrance test, daily learning and examinations.

OBJECTIVE

1. Making innovation events to develop the creativity spirit in International students.
2. Developing the skills of scientific research and the spirit of innovation among International students.
3. Exchanging innovation and invention experiences through friction between students around the world.
